Joshua Noel

Software Engineer

Trinidad and Tobago (UTC-4) | noelejoshua@gmail.com | noelejoshua.com | github.com/joshua-noel | linkedin.com/in/noelejoshua

EXPERIENCE

Technical Founder, Stealth Startup, Trinidad and Tobago — Jul 2026 - Present

Building a marketplace for small shops, now in private pilot. I design the systems and review the work; AI coding agents write the code.

- Built and launched the marketplace to a private pilot: product catalogue, search and merchant tools (TypeScript, Next.js, PostgreSQL).
- Designed and built the access broker and the sandbox the agents work under (see Projects).
- Introduced automated scoring of agent output and a required security review for high-risk changes.
- Merged 426 pull requests across seven repositories in one month, with 26 releases to the pilot.

Jr. Technical Associate, Hrizons, Trinidad and Tobago — Jan 2025 - Present

- Built the company's flagship AI product, a web app that drafts documents for clients, entirely with AI coding agents (JavaScript).
- Built a client tool that pulls data from SAP and presents it in a format that is easier to read.
- Build internal and client-facing tools and their cloud back ends.

Student Software Apprentice, University of the West Indies, DCIT Office, Trinidad and Tobago — Aug 2024

- Worked on an online student advising platform (React, Node.js).

PROJECTS

Access broker for AI coding agents, Go, SQLite — Oct 2026 - Present

- Designed a broker that keeps credentials away from AI agents: an agent requests an action, and the broker checks policy and performs it with its own keys.
- Added passkey approval (WebAuthn), so a person signs off on the exact request before any risky action runs.
- Built a hash-chained, signed audit log that records every step and shows tampering.
- Added connectors for GitHub, Linear, email and Google Drive, and a local MCP server. About 45,000 lines of Go with 900 tests.

Other

- **Sandbox for AI agent runs** (Hyper-V, Linux): each run gets its own locked-down virtual machine, an allow-list of sites it may reach, and a token that dies with the run.
- **skills** (github.com/joshua-noel/skills): 13 open-source planning and workflow skills for AI coding agents.
- **Personal site and blog** (github.com/joshua-noel/portfolio): Astro and SQLite in one Node.js process.

SKILLS

- **Languages:** Python, Java, JavaScript, C, C++, SQL
- **Shipped through AI agents:** TypeScript, Go
- **Tools:** Node.js, React, Next.js, PostgreSQL, SQLite, Docker, GitHub Actions, Git, Linux, Claude, Codex, MCP

EDUCATION

BSc Computer Science, University of the West Indies, St. Augustine, Trinidad and Tobago — Sep 2021 - Oct 2024

- 1st place, Bmobile Code Challenge (2019). 3rd place, DCIT Runtime Competition (2023).
